

Centrifugal fans

Spare parts guide

Centrifugal fans

Centrifugal fans

Benefits

BAC centrifugal fans are designed, tested, manufactured and rated by BAC for **optimum performance**. These centrifugal fans are very quiet for minimal surrounding noise.

Standard features

- Protected with the Baltibond hybrid coating*. Perfect for use in the moist cooling tower environment, ensuring **maximum service life**.
- Nearly noiseless.
- Shipped with the necessary hub clamps, hardware and adhesive for installation.

Baltibond hybrid coating*

A **special hybrid polymer is** electrostatically sprayed onto each individual galvanized steel component for complete and uniform surface coverage. All these components then undergo a heat-activated thermosetting cure process which **fuse-bonds the polymer powder to the galvanized steel surfaces**. It offers the following benefits:

- saves money
- extends the equipment service life
- saves water by applying higher cycles of concentration
- facilitates cleaning with the smooth surface finish
- respects the environment

Caution tip !

Selecting a fan requires knowledge of the cooling tower system curve (air flow, pressure drop). Changing to a non-original fan can severely deteriorate your cooling tower thermal performance and increase your process energy costs.

Want to replace the centrifugal fans of your BAC cooling equipment? Contact your [local BAC representative](#).
