Centrifugal fans

Spare parts guide

Centrifugal fans

BAC

Centrifugal fans

Benefits

BAC centrifugal fans are designed, tested, manufactured and rated by BAC for optimum performance. These centrifugal fans are very quiet for minimal surrounding noise.

Standard features

- Protected with the Baltibond hybrid coating*. Perfect for use in the moist cooling tower environment, ensuring maximum service life.
- Nearly noiseless.
- Shipped with the necessary hub clamps, hardware and adhesive for installation.

Baltibond hybrid coating*

A special hybrid polymer is electrostatically sprayed onto each individual galvanized steel component for complete and uniform surface coverage. All these components then undergo a heat-activated thermosetting cure process which fuse-bonds the polymer powder to the galvanized steel surfaces. It offers the following benefits:

- saves money
- · extends the equipment service life
- saves water by applying higher cycles of concentration
- · facilitates cleaning with the smooth surface finish
- · respects the environment

Caution tip !

Selecting a fan requires knowledge of the cooling tower system curve (air flow, pressure drop). Changing to a non-original fan can severely deteriorate your cooling tower thermal performance and increase your process energy costs.

Want to replace the centrifugal fans of your BAC cooling

equipment? Contact your local BAC representative.
