

BCP 0 C

Water treatment and filtration equipment

BCP 0 C

BCP 0 C - Automatic bleed control

Compact package for precise control of the total dissolved solids level of the recirculating water in evaporative cooling equipment.

- **Consistent good water quality:** dependable control of the cycles of concentration, regardless of the variances in thermal load profile
- **Maximum reliability:** motorized bleed that eliminates failures
- **Easy connection** to BAC equipment
- **Easy water analysis:** built-in sample point
- **Successful start-up:** after sales follow-up by BAC
- **Water and chemical savings**
- **Traceability of the water quality**

Use the BCP 0 C automatic bleed control in combination with the [Easy Treat](#) feeder for dosing anti-scale and anti-corrosion solid chemicals to the recirculating water.

Want to install an automatic bleed control on your BAC equipment? Contact your [local BAC representative](#) for help.
