## Sound attenuation

## Closed circuit cooling towers

## Options and accessories

## **Sound attenuation**

FXV-D closed circuit cooling towers use **quiet and low kW axial fans**, but to reduce noise even further, you can extend your FXV-D with <u>sound attenuation</u>:

- cylindrical baffles at the air intake
- insulated discharge attenuator without baffles

or choose the <u>Whisper quiet fan</u> alternative.

Your <u>local BAC representative</u> can explain any of the above sound attenuator options in more detail and provide you with <u>sound pressure and sound power data</u>.
