

Options and accessories

Adiabatic cooling

Options and accessories

Below is a listing of the main TVFC options and accessories. If your required option or accessory is not listed, look no further than your [local BAC representative](#).

Flanges

Flanges facilitate **piping connections** on-site.

Epoxy coating

Increase the coil's resistance against a harsh atmosphere.

Coil freeze-up safeguard

Allow for operation without any anti-freeze agents and avoid a coil freeze-up risk at the same time.

Sound reduction

Reducing noise at air **intake and discharge points** brings us closed to silent cooling equipment.

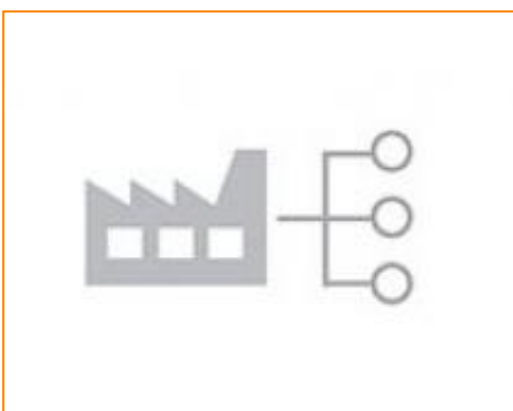

Partitioning panels

Increase the degree of redundancy, providing a higher backup capacity for your installation.

Recirculation pump

The recirculation pump helps to further cut down on water consumption.

BMS supervision

This option integrates the adiabatic cooler's control system in your BMS system.

Safety switch

Cuts power to motor with **safety in mind** during inspection or maintenance.

Electrical panel heater

Protects electronic components in the electrical panel during extremely cold temperatures.
